# Technical proposal (Envelope 1)

Tender NGPA/T/2026/021 · Port Community System: Web Platform, Messaging Hub and Integration Services

To: The Chair, Tender Committee, Northern Gulf Ports Authority

Having examined the tender documents for NGPA/T/2026/021, we, Bluewave Port Software Ltd., submit our technical proposal for the Port Community System. This envelope contains no prices. We confirm that our bid is valid as stated in our financial proposal.

Aoife Brennan
Chief Commercial Officer, Bluewave Port Software Ltd.

Date: 13 January 2027
Reference: BW-NGPA-021

SAMPLE · FICTIONAL

## 1. Company and product

Bluewave Port Software develops Bluewave PCS, a port community platform used by 11 ports in Europe, the Gulf and South-East Asia. Bluewave PCS is a multi-tenant platform delivered as a managed service; customers receive new features every quarter without upgrade projects.

| Reference | Scope | Users |
|---|---|---|
| Port of Cork Community Platform | Portal, hub, customs integration | 3,100 |
| Gulf Container Gateway | Portal, VBS, mobile app | 5,400 |
| Port of Klang Logistics Hub | Messaging hub | 2,200 |

## 2. Solution and hosting

**Base offer (Option A): managed service.** Bluewave PCS for the Authority is operated by Bluewave from its Gulf regional data centre in Manama, Bahrain (Tier III, ISO 27001), with a disaster-recovery copy in our Dublin data centre. The Authority's systems connect through a dedicated encrypted link. Availability commitment: 99.9 % per calendar month.

**Option B: on-premise installation.** Bluewave PCS can be installed in the Authority's data centres. In this option the Authority's operations team runs the platform with our third-line support. Product updates and licence entitlements are delivered through the Bluewave Update Service, which the installation contacts over the internet once a month.

The messaging hub supports UN/EDIFACT (BAPLIE, COPARN, CODECO, CUSCAR, CUSRES), XML and REST with guaranteed delivery and message tracking. Standard connectors exist for the two TOS products used at the port; customs, Maritime Single Window and ERP integrations are built with our integration toolkit.

Capacity: the platform serves 5,400 users at our largest customer; a dedicated tenant for the Authority is sized for 4,500 users, 600 concurrent users and 250,000 messages per day with a p95 processing time below 2 seconds.

## 3. Security

- MFA for all users. Internal users sign in through SAML 2.0 federation with the Authority's Active Directory Federation Services.
- Password policy: 12 characters minimum, lock-out after 5 attempts, 15-minute idle timeout.
- Audit logs are kept for 12 months in the platform and can be exported to the Authority's SIEM through our audit API every 15 minutes.
- Encryption at rest (AES-256) and in transit (TLS 1.2+). Certificates are managed by Bluewave.
- Critical vulnerabilities patched within 7 days on the managed service.
- Independent penetration tests of the platform every year; the latest report and our SOC 2 Type II report are available under NDA.
- Daily backups with 30-day retention, replicated to the disaster-recovery site; RPO 1 hour, RTO 4 hours.
- An SBOM is available for each quarterly release.

## 4. Implementation and support

| Milestone | Month |
|---|---|
| Tenant set-up and configuration | 2 |
| Portal and messaging hub live | 5 |
| TOS, customs, Maritime Single Window and ERP integrations live | 8 |
| Vehicle booking system and haulier app (Android, iOS) live | 9 |

Training of 30 Authority staff through our online academy plus two on-site workshops; community onboarding webinars for all companies, in English and Arabic.

Support: 24/7 follow-the-sun service desk. Severity 1: 1-hour response, 4-hour restoration. The portal and the haulier app are available in English and Arabic with right-to-left layout. REST APIs are documented in OpenAPI 3 and a sandbox tenant is included. Standard dashboards cover dwell time, gate waiting times and release lead times.
